

LIFESCIENCES

The sum total of lifesciences knowledge is increasing at an exponential rate. At the same time, global and domestic competition for customers and research funding is growing even more intense. Now more than ever, companies that specialize in the development and marketing of medical, pharmaceutical, agricultural and other biotechnology-related products need experienced, informed legal counsel that can help them identify, protect and take full advantage of their intellectual property portfolios.

Our Lifesciences legal team includes lawyers with advanced degrees in biotechnology, chemistry and pharmacology, as well as in chemical, biomedical and mechanical engineering. Bracewell's attorneys have extensive technical and patent experience in the full range of lifesciences disciplines, including biologics, cell biology, chemistry, combinatorial chemistry, developmental biology, diagnostics, drug delivery, genomics, immunology, mechanical and biomedical engineering
