

TELECOMMUNICATIONS

Bracewell's telecommunications lawyers represent companies at the leading edge of the telecommunications industry. These companies provide broadband and other services by wireless radio and over traditional wireline and cable systems. Our clients, for example, are building systems to provide broadband over power lines, WiMAX and other "fourth generation" wireless broadband service. Our clients have been at the forefront of development of roaming and billing systems for the worldwide wireless industry.

Other clients operate and develop telecommunications systems worldwide, and we have significant telecommunications regulatory experience in Europe and Latin America.

We also represent traditional telecommunications companies, including local exchange carriers, long distance carriers, wireless carriers, cable television operators, Internet service providers, broadcasters, industry associations, and large users of telecommunications services.
