

CLEANTECH

Cleantech is a new industry formed from our society's increasing focus on alternative sources of energy and environmental protection concerns. Cleantech companies develop products or services that enhance performance, productivity or efficiency while significantly lowering energy consumption, waste or pollution. Examples include water purification, solar and wind energy, non-toxic materials used in construction, and biofuels.

Bracewell's attorneys have vast, real-world experience in technology, science and engineering. Our Cleantech legal team includes lawyers with advanced degrees in biotechnology, chemistry, pharmacology and physics, as well as chemical, electrical and mechanical engineering. The majority of these attorneys have also spent years working in these fields for major public and private companies, research institutions and regulatory agencies. This experience, when combined with our attorneys' recognized strength in intellectua
